

SQL Server to Azure Migration

This engagement offers you Sr. level consultants and architects from Tallan to assist and help you execute a SQL database migration to Azure.

Tallan will work with your internal teams to create a SQL migration plan that will be developed during the assessment portion of this implementation. From here, we will take that roadmap and start the migration process to Azure. Upon completion, your database workloads and applications will be running on the cloud in Azure.

Timeline: 10 Days

Agenda

- Assess current on prem SQL environment
- Create a to be architecture for shifting to Azure
- Make a roadmap to get from SQL server to Azure
- Identify risk and mitigate
- Identify database dependencies
- Resolve compatibility issues
- Performance testing before and after migration

Deliverables

- Documentation of new architecture and roadmap
- Functioning SQL Azure environment
- Knowledge transfer to internal teams
- Post migration documents
