

App Innovation with Tallan

Expand your knowledge and hands-on AppDev experience in the cloud with a training and Hackfest!

Tallan's Vice President of Cloud Technologies, Dan Fluet, will host this two-day, instructor-led event in an immersive, hands-on, lab environment paired with presentations.

Schedule:

Day one will focus on Azure AppDev education in a classroom setting.

Day two, attendees will participate in a hackathon where you'll design and build a solution using the Azure knowledge you gained on day one.

Your challenge options are:

PaaS Challenge – Build a PaaS solution on Azure.

IaaS Challenge – Build a compliant architecture in order to gain experience provisioning VMs, creating virtual networks and subnets, creating NSG, etc. Extra points for scripting and automation!

Cognitive Services Challenge – We encourage teams to try Cognitive Services on Azure, we've found this choice to be very popular among Hackfest teams!

Data Challenge – This could be any Data Service in Azure. For example, HDInsight, SQL Database, Cosmos DB, Power BI, Azure SQL Data warehouse, etc.

Experience Talent-Driven Innovation

Founded in 1985, Tallan provides technology and business process consulting services to enterprise and mid-sized companies, as well as government entities, with a focus on Custom Development, Portals and Collaboration, Business Intelligence, Application Integration, Mobile Platforms, User Experience, Ecommerce, Web Development, and Cloud Services.
