

Azure Application Migration

Tallan will work with you to assess your “as is” application architecture and your ‘to be’ architecture in Azure.
The approach we take is:

During the Engagement

1-2 Week Engagement

Agenda

- Create a plan to get to PaaS
- Implement plan with Tallan team
- Review existing application architecture
- Review existing Azure environment

Deliverables

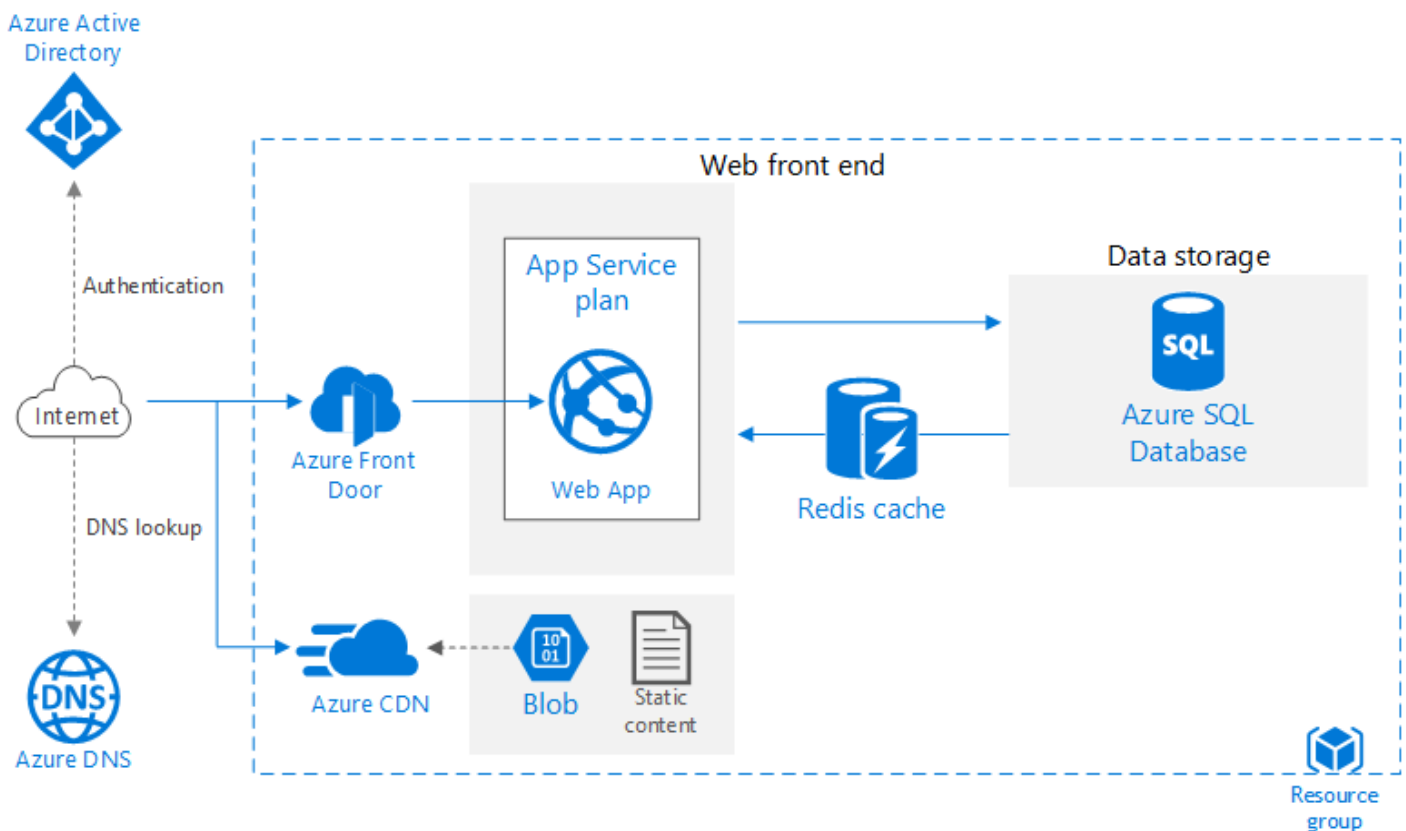

- Documented architectural best practices
- Documented concerns and recommendations
- Create migration plan to achieve Azure best practices
- Review best practices for DR/HA, security, scalability, deployment and app modernization to AppService, SQL Databases and PaaS
- Functioning application in Azure

What to Expect

Tallan will work closely with your team to review your on-prem and cloud environments and best practices for deployment to AppService, SQL Databases and PaaS services in Azure. After our review we will document architectural best practices, concerns and recommendations, as well as how to achieve Azure best practices. Upon completion, your team will have a step by step migration roadmap to move your applications and workloads to Azure.
