### RESEARCH & DISCOVERY WORKSHOP

Before our workshops begin, an initial discovery meeting will help analyze your team's business objectives, requirements, and supporting data sources.

### STORY MAPPING WORKSHOP

We'll discuss and define user stories for best-in-class user experience and the rapid prototyping of your organization's future application.

### DESIGN REVIEW SESSION

Next, we'll present the proposed experience, including effective user-centered designs with wireframes for the future state of the application. Your organization's key stakeholders will get to review the final User Experience (UX) designs and technical architecture.

### TECHNICAL REVIEW SESSION

We'll work to define and verify a system architecture featuring prioritization, backlogs, project roadmap, and cost estimates.

Entrust Tallan's cloud consulting services to help your organization with cloud migration, cloud adoption, and developing cloud-based applications using today's most cutting edge technologies. Contact [sales@tallan.com](mailto:sales@tallan.com) to get started!
